AI BUILDER CUP 2026

CaseProof

Invoice-financing document review

BFSI · Intelligent Risk, Fraud & Financial Experiences

Gemini reads the pack and plans the next request.
The bank still decides whether to finance.

Read the page

Ask once

Keep the file

The file stalls in the gap

A mismatch is easy to spot.

The expensive part is asking once, recording the answer, and knowing what still blocks the file.

Disagree

The invoice total and the delivery evidence do not match, or part of the delivery is missing.

Ask again

The reviewer writes, waits, and writes again for whatever is still open.

No shared picture

The business cannot see the block. The bank file cannot show how it cleared.

Three people, one file

Reviewer

Sees the quote beside the field, the checklist, and one request. Records exceptions. Does not approve financing.

Submitting business

Sends the invoice and receipts, answers that one request, and receives a document-review notice when the review is complete.

Bank file

Keeps a frozen PDF and JSON. The client notice omits reviewer names, staff notes, and model traces.

Gemini proposes. Code commits

Gemini on Vertex

- Proposes each field with its source quote
- Plans one request for every open gap
- Leaves a written dispute with a person
- Can review images and public evidence

The application

- Commits arithmetic and delivery identity
- Holds a repeated seller invoice
- Owns tool scope, budget, and completion
- Leaves financing with the bank

Google Search, only when that case opts in

The call receives the company name, country, registration number, date, and a research angle. Invoice amounts, documents, messages, and case identifiers stay off it.

One case, end to end

1 Vendor submits

Invoice plus a receipt that covers only part of the delivery.

2 Checklist opens

Wrong total and missing delivery, shown beside the source quote.

3 One request

Both gaps go out together. The business is not asked twice.

4 Checklist closes

The corrected invoice and the remaining receipt turn it green.

5 A person decides

A dispute, or an instruction in the file, stays with the reviewer.

6 Two documents

The vendor gets the client notice. The bank keeps the full summary.

Built to run on Cloud Run

Cloud Run

Web, API, and worker as separate services

Records

Cloud SQL for the case. A private bucket for originals and summaries

Delivery

Cloud Tasks runs the worker. Cloud Scheduler reconciles

Model

Vertex AI Gemini, with Google ADK for the agent

Already bounded

Model work leaves the browser request. Originals are written once. Each case reserves cost and caps wakeups.

Prototype, on purpose

PDFs, scans, images, DOCX, XLSX, CSV and text. Multiple items, currencies and taxes. Hosted demo access uses a code.

Limits, stated up front

Financing

Does not approve, price, limit, or pay.

Screening

Does not run sanctions, PEP, or adverse-media checks as a control.

Authenticity

Does not prove a document is genuine, or verify legal identity.

Credit

Does not score a company, or watch it over time.

Evidence on this build

60 constructed cases, 12 families, run on 12 October 2026. Zero incorrect completions on the agent and on the fixed-rule baseline. Staff minutes in that report are a time model, not a measured saving.
